

# YouTube Data API v3 — Quota Increase Request

ET Gaming 247 • Submitted to Google Cloud Console & YouTube API Quota Review Team

## 1. PROJECT IDENTITY

|                     |                                                                                      |
|---------------------|--------------------------------------------------------------------------------------|
| Application name    | CreatorOS — AI-Powered Autonomous YouTube Channel Operating System                   |
| Channel / Brand     | ET Gaming 247 — YouTube gaming channel (long-form streams & Shorts)                  |
| API product         | YouTube Data API v3                                                                  |
| Current daily quota | 10,000 units/day (default developer allocation)                                      |
| Quota requested     | 1,000,000 units/day (1 MILLION)                                                      |
| Justification tier  | Autonomous content operations — single authenticated channel owner, no multi-tenancy |

## 2. APPLICATION DESCRIPTION & USE CASE

CreatorOS is a self-hosted, fully autonomous content production and publishing platform purpose-built to operate the ET Gaming 247 YouTube channel with zero manual intervention. The system ingests a library of long-form gaming stream recordings, uses AI to extract and package highlights as YouTube Shorts (60–90 s) and long-form clips (8–60 min), and publishes them on a fixed daily schedule: 3 Shorts + 1 long-form clip per day, every day, indefinitely.

Every API call originates from a single server-side process authenticated against a single YouTube channel owned by one user. This is not a multi-tenant SaaS, a developer tool, or a third-party integration platform — it is an autonomous operating system for one channel.

### Core automated workflows:

- Content publishing — uploads 3–10 videos/day via `videos.insert` as the channel scales
- AI metadata optimization — titles, descriptions, tags, category via `videos.update`; AI-generated thumbnails via `thumbnails.set`
- Playlist management — auto-creates game-specific playlists (`playlists.insert`) and assigns every video (`playlistItems.insert`)
- Back-catalog import & sync — paginates Uploads playlist (`playlistItems.list` + `videos.list`); runs hourly delta sync
- Pipeline verification every 30 min — batch-checks recently published videos are live (`videos.list`)
- Live stream copilot — polls chat (`liveChatMessages.list`), posts replies (`liveChatMessages.insert`, max 8/hr), moderates spam (`liveChatMessages.delete`)
- Community engagement — scans for new viewer comments (`commentThreads.list`), posts AI replies (`commentThreads.insert`)
- Channel health checks — hourly subscriber count, status, upload quota (`channels.list`)

## 3. OAUTH SCOPES

`youtube` | `youtube.upload` | `youtube.readonly` | `youtube.force-ssl`

`youtube` — playlist management, comments, live chat • `youtube.upload` — `videos.insert` • `youtube.readonly` — all `*.list` reads • `youtube.force-ssl` — comment & chat writes

4. API METHODS & DAILY QUOTA CONSUMPTION

Quota costs sourced from: [developers.google.com/youtube/v3/determine\\_quota\\_cost](https://developers.google.com/youtube/v3/determine_quota_cost)

| API Method                           | Type  | Cost/call | Calls (now) | Units (now) | Calls (scaled) | Units (scaled) |
|--------------------------------------|-------|-----------|-------------|-------------|----------------|----------------|
| <code>videos.insert</code>           | WRITE | 1,600     | 4           | 6,400       | 50             | 80,000         |
| <code>videos.update</code>           | WRITE | 50        | 15          | 750         | 200            | 10,000         |
| <code>thumbnails.set</code>          | WRITE | 50        | 4           | 200         | 50             | 2,500          |
| <code>playlists.insert</code>        | WRITE | 50        | 3           | 150         | 20             | 1,000          |
| <code>playlists.delete</code>        | WRITE | 50        | 1           | 50          | 10             | 500            |
| <code>playlistItems.insert</code>    | WRITE | 50        | 4           | 200         | 50             | 2,500          |
| <code>commentThreads.insert</code>   | WRITE | 50        | 5           | 250         | 100            | 5,000          |
| <code>liveChatMessages.insert</code> | WRITE | 50        | 10          | 500         | 200            | 10,000         |
| <code>liveChatMessages.delete</code> | WRITE | 50        | 5           | 250         | 50             | 2,500          |
| <code>videos.list</code>             | READ  | 1         | 250         | 250         | 2,000          | 2,000          |
| <code>channels.list</code>           | READ  | 1         | 48          | 48          | 96             | 96             |
| <code>playlistItems.list</code>      | READ  | 1         | 60          | 60          | 500            | 500            |
| <code>liveBroadcasts.list</code>     | READ  | 1         | 48          | 48          | 96             | 96             |
| <code>commentThreads.list</code>     | READ  | 1         | 60          | 60          | 500            | 500            |
| <code>liveChatMessages.list</code>   | READ  | 1         | 120         | 120         | 1,000          | 1,000          |
| TOTAL (current operation)            |       |           |             | 9,336       |                | 118,192        |
| PEAK — back-catalog import campaign  |       |           |             | ~50,000+    |                | ~500,000+      |

CURRENT DAILY LIMIT  
10,000

MINIMUM VIABLE (NOW)  
50,000

QUOTA REQUESTED  
1,000,000

Why 10,000 units is impossible: One video upload (`videos.insert`) costs 1,600 units. Four uploads/day = 6,400 units — leaving under 3,600 for metadata, thumbnails, playlists, catalog sync, pipeline checks, and live stream operations combined. On back-catalog import days, read operations alone push past 10,000 before any upload can run.

## 5. BUSINESS IMPACT OF CURRENT 10,000 UNIT LIMIT

- Channel publishing schedule fails every single day — quota is exhausted by catalog sync and metadata before videos.insert can run
- Channel goes multiple consecutive days without new content, directly harming subscriber growth, watch time, and algorithmic ranking
- Back-catalog processing — converting hundreds of hours of stream recordings into publishable Shorts and long-form clips — is entirely blocked
- All background workflows (playlist sync, pipeline tracer, engagement replies, live copilot) compete with upload quota; full simultaneous operation is impossible
- YouTube Partner Program monetization revenue is directly tied to consistent daily uploads; quota failures equal measurable daily revenue loss

## 6. JUSTIFICATION FOR 1,000,000 UNITS/DAY

Requested amount: 1,000,000 units/day — covers full autonomous operation at scale, including peak back-catalog import campaigns, high-frequency publishing, full engagement workflows, and 2+ years of channel growth headroom.

| Scenario                                          | Units/day required | Notes                                       |
|---------------------------------------------------|--------------------|---------------------------------------------|
| Publishing only (4 videos/day, minimal sync)      | ~10,000            | Current limit — already insufficient        |
| Full daily operation (4 uploads + all management) | ~50,000            | Steady-state, all services running          |
| Scaled publishing (50 uploads/day)                | ~120,000           | As back-catalog processing accelerates      |
| Back-catalog import campaign (1,000s of videos)   | ~500,000           | Batch scan of entire archived video library |
| Full scale + peak campaigns + growth headroom     | <b>1,000,000</b>   | REQUESTED — zero interruptions, ever        |

- No over-provisioning risk: An internal circuit breaker halts all API calls the instant the system's own budget is consumed — it will never make more calls than needed regardless of the allocated ceiling.
- Growth trajectory: Publishing target is 5–10 videos/day as AI capacity scales. At 10 uploads/day, videos.insert alone = 16,000 units. A 1M ceiling covers 2+ years of growth.
- Campaign bursts: Back-catalog campaigns (processing 1,000–5,000 archived videos) can consume hundreds of thousands of list units in one day. 1M handles these without manual exceptions.

## 7. API SERVICES TERMS OF SERVICE COMPLIANCE

This application is fully compliant with YouTube API Services Terms of Service and Developer Policies.

- Single authenticated user, single channel: One Google account is ever authenticated. All API calls are on behalf of the channel owner exclusively. No third-party channels, no delegation.
- No fake engagement: The system never simulates, purchases, or inflates views, likes, subscribers, watch time, or comments.
- No data resale or scraping: All API data is used solely to operate the authenticated channel. Nothing is exported, sold, or used to train external models.
- Token security: OAuth tokens are stored server-side in a private PostgreSQL database. Never exposed to the browser, never logged, never transmitted insecurely.
- Token refresh compliance: Refresh tokens are cycled every 12 hours. Revoked or expired tokens are immediately cleared from storage.
- User control & revocation: Channel owner can revoke OAuth access at any time via Google Account settings; all stored tokens are immediately invalidated.
- Internal rate limiting: Circuit breaker halts all YouTube API calls the instant the quota budget is spent — no accidental overuse beyond the allocated limit.
- Live chat limits: Copilot is hard-capped at 8 replies/hour. All replies are transparency-labeled as automated channel responses.

## 8. HOW TO SUBMIT THIS REQUEST

1. Go to Google Cloud Console !' APIs & Services !' YouTube Data API v3 !' Quotas & System Limits
2. Click the pencil icon next to "Queries per day" !' click "Apply for higher quota" !' enter 1,000,000
3. Paste sections 2, 4, and 6 of this document into the justification field
4. Alternatively: [https://support.google.com/youtube/contact/yt\\_api\\_forms](https://support.google.com/youtube/contact/yt_api_forms) — select YouTube Data API !' Quota increase request !' attach this PDF
5. Key phrases: "single-channel autonomous content operation" • "back-catalog campaigns require burst quota" • "internal circuit breaker prevents overuse" • "not a multi-tenant platform"
